

Week 13: Advanced Process Comparison Writing and Presentation

Unit ILO:

Compare two engineering processes, systems, or tools clearly and effectively using structured paragraphs, comparative language, and technical vocabulary.

Session 1: Understanding Comparison Structure and Language

Session ILO:

Analyze the structure and language features of a well-organized technical comparison to prepare for writing a process comparison.

Learning Task 1: Comparison Paragraph Analysis

Learning Task 2: Comparison Planning Organizer

Performance Task (Part 1): Write Draft Sentences

Language Focus:

- Comparative structures: “more... than,” “as... as,” “whereas,” “while”
- Passive voice: “is operated,” “is maintained,” “is preferred in...”
- Academic transitions: “In contrast,” “On the other hand,” “Similarly”

////////////////////////////////////

Learning Task 1: Comparison Paragraph Analysis

Read and work through “Comparing Dry Etching and Wet Etching Worksheet”.

Learning Task 2: Comparison Planning Organizer

Choose two related tools, systems, or methods you are familiar with (e.g., manual soldering vs. reflow soldering, thermal vs. UV curing).

→ Complete a side-by-side comparison chart including:

3 comparison points (e.g., speed, accuracy, safety)

Notes for each item under each criterion

Performance Task (Part 1): Write Draft Sentences

Use your chart to write 4–6 practice comparison sentences:

- “While System A requires manual input, System B is fully automated.”
- “System A is more cost-effective, whereas System B offers higher precision.”

Performance Task: Write a 150-Word Comparison Paragraph

Write a full paragraph comparing two selected tools/processes.

✓ Include:

- Topic sentence
- At least 3 comparison criteria
- Comparative language
- Passive voice
- Concluding sentence

After drafting, exchange with a partner and check for:

- Logical structure
- At least 3 accurate comparisons
- Appropriate comparative phrases

Week 14

Present to class
