

Joint Distributions

Bivariate distribution

Definition

X, Y : discrete random variables defined on the same sample space.

A, B : sets of possible values of X and Y .

$$p(x, y) = P(X = x, Y = y) = P(A \cap B)$$

$$\sum_{x \in A} \sum_{y \in B} p(x, y) = 1$$

Probability mass function of X

$$p(x) = P(X = x) = P(x = x, y \in B) = \sum_{y \in B} p(x, y)$$

Theorem

$p(x, y)$: Joint probability mass function of discrete R.V. X and Y .

$h(X, Y)$: A function of X and Y

$$E[h(X, Y)] = \sum_{x \in A} \sum_{y \in B} h(x, y)p(x, y)$$

$$E(X + Y) = E(X) + E(Y)$$

Proof

$$\begin{aligned} E[X + Y] &= \sum_{x \in A} \sum_{y \in B} (x + y)p(x, y) \\ &= \sum_{x \in A} \sum_{y \in B} xp(x, y) + \sum_{x \in A} \sum_{y \in B} yp(x, y) \\ &= \sum_{x \in A} x \left(\sum_{y \in B} p(x, y) \right) + \sum_{y \in B} y \left(\sum_{x \in A} p(x, y) \right) \\ &= \sum_{x \in A} xp_X(x) + \sum_{y \in B} yp_Y(y) = E[X] + E[Y] \end{aligned}$$

Definition

Two r. v.'s X and Y , defined on the same sample space, have a continuous joint distribution if there exists a nonnegative function of 2 variables, $f(x, y)$ on $\mathbb{R} \times \mathbb{R}$ such that for some region S in the xy -plane

$$P((X, Y) \in S) = \iint_S f(x, y) dx dy$$

$f(x, y)$: is called the joint (probability) density function of X and Y .

Definition

單點機率為 0 : $P(X = a, Y = b) = \int_b^b \left(\int_a^a f(x, y) dx \right) dy = 0$

總和機率為 1 : $A = (-\infty, +\infty), B = (-\infty, +\infty) \implies \int_{-\infty}^{+\infty} \int_{-\infty}^{+\infty} f(x, y) dx dy = 1$

Definition

Let X and Y have joint density function $f(x, y)$

$$f_Y(y) = \int_{-\infty}^{\infty} f(x, y) dx$$

$$f_X(x) = \int_{-\infty}^{\infty} f(x, y) dy$$

are called, the marginal (probability) density functions of X and Y .

Definition

Joint (cumulative) distribution function

$$F(X, Y) = F(t, u) = P(X \leq t, Y \leq u) = \int_{-\infty}^u \int_{-\infty}^t f(u, t) dy du$$

The marginal distribution function

$$F_X(t) = P(X \leq t) = P(X \leq t, Y \leq \infty) = F(t, \infty)$$

$$F_Y(t) = P(Y \leq t) = P(X \leq \infty, Y \leq t) = F(\infty, t)$$

Ex 8.4 The joint density function of random variables X and Y is given by

$$f(x, y) = \begin{cases} \lambda xy^2 & 0 \leq x \leq y \leq 1 \\ 0 & \text{otherwise.} \end{cases}$$

(a) Determine the value of λ

$$\begin{aligned} & \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} f(x, y) dx dy \\ &= \int_0^1 \int_0^y \lambda xy^2 dx dy \\ &= \int_0^1 \lambda \left(\frac{1}{2} x^2 y^2 \right) \Big|_0^y dy \\ &= \lambda \int_0^1 \frac{1}{2} y^4 dy \\ &= \lambda \left(\frac{1}{10} y^5 \right) \Big|_0^1 \\ &= \frac{1}{10} \lambda \end{aligned}$$

Ans: $\lambda = 10$ #

(b) Find the marginal density function of X and Y .

作答注意範圍

$$\begin{aligned} f_X(x) &= \int_{-\infty}^{\infty} f(x,y) dy \\ &= \int_x^1 f(x,y) dy \\ &= 10 \left(\frac{1}{3} x y^3 \right) \Big|_x^1 \\ &= \frac{10}{3} (x - x^4) \quad \# \quad \text{if } 0 \leq x \leq 1 \end{aligned}$$

$$\begin{aligned} f_Y(y) &= \int_{-\infty}^{\infty} f(x,y) dx \\ &= \int_0^y 10 x y^2 dx \\ &= 5 x^2 y^2 \Big|_0^y \\ &= 5 y^4 \quad \# \quad \text{if } 0 \leq y \leq 1 \end{aligned}$$

$$\begin{aligned} F(t,u) &= P(X \leq t, Y \leq u) \\ &= \int_{-\infty}^Y \int_{-\infty}^x f(x,y) dt du \\ &= \int_0^Y \int_u^x 2 dt du \\ &= \int_0^Y (2t) \Big|_u du \\ &= \int_0^Y 2x - 2u du \\ &= (2Xu - u^2) \Big|_0^Y \\ &= 2XY - Y^2 \end{aligned}$$

後面還有一坨範圍判定

Ex 8.5

For $\lambda > 0$, let

$$F(x, y) = \begin{cases} 1 - \lambda e^{-\lambda(x+y)} & \text{if } x > 0, y > 0 \\ 0 & \text{otherwise.} \end{cases}$$

Determine if F is the joint distribution function of 2 random variables X and Y.

$$\begin{aligned} & \frac{\partial^2}{\partial x \partial y} F(x, y) \\ &= \frac{\partial}{\partial x} -\lambda e^{-\lambda(x+y)} \cdot (-\lambda) \\ &= \frac{\partial}{\partial x} \lambda^2 e^{-\lambda(x+y)} \\ &= -\lambda^3 e^{-\lambda(x+y)} \quad \text{if } x > 0, y > 0 \\ & \hookrightarrow \text{負的, 所以不行} \quad \# \end{aligned}$$

Ex 8.6 A circle of radius 1 is inscribed in a square with sides of length 2. A point is selected at random from the square. What is the probability that the point is inside the circle?

$$\frac{\pi}{4} \#$$

Theorem 8.2

$$E(Z) = \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} h(x, y) f(x, y) dx dy$$

$$Z = h(x, y)$$

$f(x, y)$: The probability density function

Corollary

For continuous r. v.'s X and Y , $E(X + Y) = E(X) + E(Y)$

$$\begin{aligned} E(X + Y) &= \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} (x + y) f(x, y) dx dy && \text{marginal density function} \\ &= \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} x f(x, y) dx dy + \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} y f(x, y) dx dy \\ &= E(X) + E(Y). \end{aligned}$$

Ex 8.9 Let X and Y have joint density function

$$f(x, y) = \begin{cases} \frac{3}{2}(x^2 + y^2) & \text{if } 0 < x < 1, 0 < y < 1 \\ 0 & \text{otherwise.} \end{cases}$$

Find $E(X^2 + Y^2)$

$$\text{Let } h(x, y) = x^2 + y^2$$

$$\begin{aligned} E(X^2 + Y^2) &= E(h(x, y)) \\ &= \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} h(x, y) \cdot f(x, y) dx dy \\ &= \int_0^1 \int_0^1 h(x, y) \cdot \frac{3}{2} h(x, y) dx dy \\ &= \frac{3}{2} \int_0^1 \int_0^1 (x^2 + y^2)^2 dx dy \\ &= \frac{3}{2} \left[\int_0^1 \left(\frac{x^5}{5} + \frac{2x^3y^2}{3} + \frac{y^5}{5} \right) dx \right]_0^1 \\ &= \frac{3}{2} \left[\frac{1}{5} + \frac{2}{3} + \frac{1}{5} \right] = \frac{3}{2} \cdot \frac{8}{15} = \frac{4}{5} \end{aligned}$$

8.2 Independent random variables

Definition

A, B are called independent if $P(X \in A, Y \in B) = P(X \in A)P(Y \in B)$

If A, B are independent, then :

Probability

$$P(X \leq a, Y \leq b) = P(X \leq a)P(Y \leq b)$$

Joint distribution function

$$F(t, u) = P(X \leq t, Y \leq u) = F_X(t)F_Y(u)$$

Joint PMF

$$p(x, y) = p_X(x)p_Y(y)$$

離散

Joint density function

$$f(x, y) = f_X(x)f_Y(y)$$

連續

Theorem 8.5

X, Y: two independent R.V.

g, h: two $\mathbb{R} \rightarrow \mathbb{R}$ function

$\rightarrow g(X)$ and $h(Y)$ are also independent

Theorem 8.6

X, Y: two independent R.V

g, h: two $\mathbb{R} \rightarrow \mathbb{R}$ function

$$E[g(X)h(Y)] = E[g(X)]E[h(Y)]$$

本理論不是雙向的，如果

$$E[g(X)h(Y)] = E[g(X)]E[h(Y)]$$

成立，不代表他們一定獨立

$$\boxed{\text{Proof}} \quad E(Z) = E[g(X)h(Y)]$$

$$= \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} [g(x)h(y)] \cdot f(x, y) \, dx \, dy$$

$$= \int_{-\infty}^{\infty} \int_{-\infty}^{\infty} [g(x)h(y)] \cdot [f_X(x) \cdot f_Y(y)] \, dx \, dy$$

$$= \int_{-\infty}^{\infty} h(y) f_Y(y) \, dy \cdot \int_{-\infty}^{\infty} g(x) f_X(x) \, dx$$

$$= E[h(Y)] \cdot E[g(X)]$$

Ex 8.15 Prove that 2 random variables X and Y with the following joint density function are not independent.

$$f(x, y) = \begin{cases} 8xy & 0 \leq x \leq y \leq 1 \\ 0 & \text{otherwise.} \end{cases}$$

找 x 範圍

1. 找隨意 y 值
2. 看 x 的 Range
3. $0 \sim y$

8.3 Conditional distributions

$$p_{x|y}(x|y) = p_x(x|y) = \frac{p(x,y)}{p(y)} = p(x|y)$$

All Be Okay

Ex 8.21 Let X and Y be continuous random variables with joint density function

$$f(x,y) = \begin{cases} \frac{3}{2}(x^2 + y^2) & \text{if } 0 < x < 1, 0 < y < 1 \\ 0 & \text{otherwise.} \end{cases}$$

Find $f_{X|Y}(x|y)$.

$$\begin{aligned} f(x|y) &= \frac{f(x,y)}{f(y)} \\ f(y) &= \int_0^1 \frac{3}{2}(x^2 + y^2) dx \\ &= \frac{3}{2}y^2 + \left(\frac{1}{2}x^3\right)\Big|_0^1 \\ &= \frac{3}{2}y^2 + \frac{1}{2} \end{aligned}$$

$$f_{X|Y}(x|y) = \frac{3/2(x^2 + y^2)}{(3/2)y^2 + 1/2} = \frac{3(x^2 + y^2)}{3y^2 + 1}$$

for $0 < x < 1$ and $0 < y < 1$.
Everywhere else, $f_{X|Y}(x|y) = 0$.

Ex 8.22 First, a point Y is selected at random from the interval $(0,1)$. Then another point X is chosen from the interval $(0,Y)$. Find the density function of X .

$$\begin{aligned} f(y) &= \begin{cases} 1 & \text{if } 0 \leq y \leq 1 \\ 0 & \text{otherwise} \end{cases} \\ f(x|y) &= \begin{cases} \frac{1}{y} & \text{if } 0 \leq x \leq y, 0 \leq y \leq 1 \\ 0 & \text{otherwise} \end{cases} \end{aligned}$$

$$\begin{aligned} f(x|y) &= \frac{f(x,y)}{f(y)} & f(x,y) &= f(x|y) \cdot f(y) \\ & & &= \frac{1}{y} \text{ if } 0 \leq x \leq y \leq 1 \end{aligned}$$

$$\begin{aligned} f(x) &= \int_x^1 \frac{1}{y} dy \\ &= -\ln(x) \text{ if } 0 \leq x \leq 1, \text{ elsewhere } 0 \end{aligned}$$

Ex 8.24 Let X and Y be continuous random variables with joint density function

$$f(x, y) = \begin{cases} e^{-y} & \text{if } y > 0, 0 < x < 1 \\ 0 & \text{elsewhere.} \end{cases}$$

Find $E(X | Y = 2)$.

$$\begin{aligned} E(X | Y = 2) \\ = \int_{-\infty}^{\infty} x \cdot f(x, 2) \, dx \end{aligned}$$

$$f(x, 2) = \frac{f(x, 2)}{f_Y(2)}$$

$$\begin{aligned} f_Y(2) &= \int_{-\infty}^{\infty} f(x, 2) \, dx \\ &= \int_0^1 e^{-2} \, dx = e^{-2} \end{aligned}$$
